

Children will ask questions and use discussion to develop their idea and understanding.

At St James CE Primary Academy we believe that:

Children will have the chance to apply their science learning to real life experiences making science meaningful.

At St James CE Primary Academy our vision is to ignite pupils' curiosity and encourage them to confidently explore and discover the world around them through an exciting, inclusive and inspiring curriculum. Through purposeful enquiry and a rich, stimulating environment pupils are given opportunities to explore, question and be challenged in order to develop a deeper understanding of the world around them. By providing these opportunities, we ensure that our children are motivated, confident, lifelong learners who will continue to explore the world around them, way beyond their time at primary school.

Children must have engaging and practical science lessons which inspire them.

Children must have the chance to foster their natural curiosity and use a range of scientific methods to explore.

Children must have the chance to be independent, lead their own learning and be given opportunities to ask questions and reflect.
